Freemake video converter full setup free download

Updated: 02/27/2019 by Computer Hope A video converter may refer to any of the following: 1. A video converter is a hardware device that turns one type of video signal to another. Examples include VGA to DVI, DVI to VGA, HDMI to DVI, or VGA to composite video. You may need a video converter to connect an older monitor to a new computer or a new monitor to an older computer. Keep in mind that each video format has different video resolution and capabilities and converting a signal may give a lower quality signal. An example is converting DVI to VGA since DVI has a higher video resolution capability than VGA. However, with some setups a video converter may be the only option even with a loss of quality or performance. Related pages 2. A software video converter is a software program designed to convert one native file format into another format. For example, WinFF is a great video converter that converts a video file into many different formats. Video terms If you watch videos on a variety of devices, its likely that you've run into compatibility issues. Your iPhone might record 4K video, but can your PlayStation or your smart TV play that video seamlessly? Luckily, there are many free video converters available that will help you convert and watch your favorite videos on the device of your choice. Here are our top picks. Handbrake: The Best Choice for Most People (Windows, macOS, Linux) Handbrake is an open source video converter available for Windows, Mac, and Linux based systems. It supports a wide range of video and audio formats for conversion, the full list of which is in the image below. There are a couple of features in Handbrake that makes it a top choice for video converting software. The first is its vast range of presets. Even if you don't know anything about video conversion, you can pick a preset and get a pretty good result. You do get the option of tweaking the settings of a preset conversion, which makes it even more useful. The second standout feature is a live preview. If you're converting a bunch of videos and are unsure about the quality of the preset you've selected, you can use the live preview to convert a small section of a video. You can then preview the converted clip immediately and decide if that preset works for your needs, or if should tinker with the settings or switch to another preset. The only drawback of Handbrake is that its conversion process is slower than some of the other converters on our list. RELATED: How to Use Handbrake to Convert Any Video File to Any Format Online-Convert: A Simple Online Solution (Web Browser) Online Convert lets you convert videos in your browser so that you can use it on any platform. The process of converting videos on Online-Convert is slightly different than most other sites of its kind. Instead of uploading a file and then choosing the format to convert to, you first have to choose a file format. After that, you can then upload a file, enter a URL, or choose a file from your Dropbox or Google Drive account. You don't get a lot of options for conversion like some of the other software, but it does cover the basics. One thing to note is that Online-Convert does not display any metadata about the source file that you upload. This makes choosing the right settings difficult if you don't know some details about your source file. However, the actual conversion process is pretty fast, and you'll be able to download the file as soon as it's converted. Overall, Online-Convert is a decent choice for people who don't want to worry about the details and just want the file converted. MediaCoder HQ: Fast Conversion (Windows) Media Encoder HQ is a fantastic video converter, but it's only available for Windows. It's been around since 2005 and is frequently updated. It also supports a wide range of formats, as shown in the image below. Media Encoder HQ supports converting local and hosted files. However, using URLs from video streaming websites does not work. For local files, the conversion process is pretty fast thanks to the GPU accelerated transcoding process. One small drawback of Media Encoder is that it's not exactly made for beginners. Finding settings is tricky, and so is configuring the transcode process. However, if you know some video conversion basics, you should be able to work it out easily enough. Any Video Converter: A Simple, Intuitive Interface (Windows, macOS) Any Video Converter, or AVC for short, is another user-friendly video converter available for Windows and Mac. AVC's simple, well-organized interface makes it more user-friendly than some of the other converters on our list. Similar to Handbrake, AVC also has a lot of presets built-in that take the guesswork out of the editing process. The presets are organized by device type, which makes it easy to find the right preset. Although AVC is ad-free, it does prompt you to install additional, often unwanted software during setup. It's easy to miss if you're not paying attention, so keep an eye out for that. Freemake Video Converter is a free video converter with a simple design and interface that supports conversion between a massive number of input formats. You can also use it to trim videos, add subtitles, and even burn files directly to a disc. This freeware video converter is one of the best of its kind: Freemake Video Converter converts nearly any video file to popular formats while supporting a massive amount of input file formats. It can convert video files directly to a DVD or Blu-ray disc, and it provides an option to make a DVD menu when burning files to a disc It can convert files and automatically upload them to YouTube. It also downloads and alters streaming clips from YouTube and other video sites and extracts audio from YouTube clips. This software is a good choice for making your own DVDs because you can easily send video directly to a DVD menu and subtitles. Freemake Video Converter supports all popular and rare, non-protected formats including: 3GP, AAC, AC3, ADTS, AIF, AIFC, ALAW, AMR, AMV, ANM, APC, APE, AU, AVHCD, AVI, AVS, BIK, BMP, BNK, CAF, CAVS, CDG, DPG, DPX, DTS, DV1394, DVD, DNA, EA, FFM, FILM, FILM_CPK, FLAC, FLC, FLH, FLT, FLV, FLX, GIF, GSD, GSM, GXF, H261, H263, H264, HTML5, JPG, M2A, M4A, M4R, M4V, MJ2, MJPG, MKA, MKM, MKV, MLP, MME, MOV, MP+, MP1, MP2, MP3, MP4, MPC, MPEG4, MPG, MTS, MTV, MXF, NC, NUT, OGG, OGM, OGV, OMA, PAM, PCX, PGM, PNG, PPM, PVA, QCP, QT, R3D, RA, RAS, RAX, RM, RMJ, RMS, RMX, RPL, RTSP, SDP, SGI, SHN, SMK, SR, SWF, TGA, THP, TIF, TOD, TS, TTA, TXD, VC1, VFW, VOC, VRO, W64, WAV, WMA, WV, and XA. You can use Freemake Video Converter to convert clips for any device that has media playback capability. Supported devices include iPhone and iPad, Windows, Android, PSP, Xbox, Nokia, Huawei, Xiaomi, and others. If your device isn't on the supported list, you can set up custom conversions settings. Open the file you want to convert. Do so by selecting any of the following depending on what the file is and where it's stored: Video, Audio, DVD, Photo, Paste URL. If you've added more than one file to Freemake Video Converter with the intention to combine them into one larger file, select Join files at the top right of the program. Optionally edit the video by selecting the scissors icon to the right of the file. Press OK when you're finished with any edits. Choose from the bottom of the screen the format you want to convert the file to. Use the arrows on either side of the list of formats to pick either a file format—like MKV, FLV, AVI, MP4—or a device (e.g., to Samsung or to Apple). Press Browse to the right of the Save to box to pick where the converted file should be saved and what it should be named. You can also use this time to edit the conversion preset. Select the gear/settings button to open the preset editor where you can adjust the frame size, video codec, audio codec, and more. Select Convert to start the conversion process, and then wait while it completes. Press OK on the Conversion completed prompt. The video was saved to the location you chose in Step 4. You can now close down the other success message and exit Freemake Video Converter. To convert a different video right away, right-click the current one and select Remove. Thanks for letting us know! Tell us why! By Preston Gralla, PCWorld | New finds in freeware and shareware You just want to download videos from YouTube. Well, and to convert the videos to watch on your iPod or cell phone. Or maybe to another video type. That means you want freebie YouTube Downloader. It runs as a small applet and is exceedingly simple to use. Copy the URL of the YouTube video into it (you'll find the URL on the upper right-hand side of the video page in YouTube), then tell the program to do its work. You'll be able to choose your destination folder and name of the downloaded video.Conversion is similarly easy. Choose the downloaded file you want to convert, then choose the download format and click OK, and the work is done. You can convert to many different formats, including for the iPod, iPhone, cell phones, PlayStation Portable, as well as common PC formats including MPEG and Windows Media (.wmv). Given that all this is free, what's not to like?Note that when you install this software, by default it will install the Yahoo Toolbar and make Yahoo your default search engine. If you don't want that to happen, make sure to uncheck the boxes before installation. Note: When you purchase something after clicking links in our articles, we may earn a small commission. Read our affiliate link policy for more details. Many other apps, such as Tunebite Platinum, charge for the privilege of ripping videos from YouTube and other Flash-based video sites into the format you want. Freemake Video Downloader is free, and is extraordinarily simple to use, with bright, colorful icons and a streamlined graphical user interface. Providing no copyrights are violated in the process, it's hard to imagine a reason not to use it.Freemake Video Downloader lets you grab high-definition movie trailers for later offline viewing.To use Freemake Video Downloader, simply navigate to the video in your favorite video site, like YouTube or DailyMotion (nothing with security like Hulu), then paste the entire URL into Freemake Video Downloader and click Add. You'll be able to automatically chose the definition of the video (SD, 720p HD, etc) if the video site uses the option, as well as the file format. Then click Downloader. Several minutes later, you'll have a standalone video file on your PC. Windows Media Player will play some of the formats, but for best results, download the latest version of VLC, which plays everything. Freemake Video Downloader can also convert existing videos to AVI or grab the audio track and turn into MP3, but you may wish to convert to other formats. At that point, try the sister app from Ellora Assets Corporation, Freemake Video Converter. FVC will let you take your video file and turn it into another format (some of which Freemake Video Downloader can convert to when it first rips the file from the Web, but some that FVC doesn't support, so it helps to have both apps).Whatever format you choose to download into or convert into, be aware that Freemake Video Downloader has presets for everything, and these presets can't be changed. The average video will have eight different options to choose from, and that's it. For finer control over video ripping, try Tunebite Platinum, though that app is far more complicated and less user friendly than Freemake Video Downloader.Freemake Video Downloader supports Web video up to 1080p, so grab those high-def trailers or other videos and watch them offline on your gigantic monitor, all without paying a dime. What's not to like? Note: When you purchase something after clicking links in our articles, we may earn a small commission. Read our affiliate link policy for more details.
