Printable vinyl sticker paper

This post and the photos within it may contain Amazon or other affiliate links. If you purchase something through the link, I may receive a small commission at no extra charge to you. Use printable vinyl to make all sorts of stickers, labels, and decals! Here's everything you need to know about using printable vinyl, as well as a set of cleaning labels made from printable vinyl and cut on a Cricut! This post is sponsored by JOANN. Did you know that you can make stickers and labels with your Cricut? It's easy using the Print then Cut feature and printable vinyl! Today I'm partnering with my favorite craft store JOANN to show you how to use printable vinyl—and how to make easy labels for all of your cleaning supplies! Frequently Asked Questions about Printable Vinyl Let's start out by learning about printable vinyl and what you can do with it. What is Printable Vinyl? Printable vinyl is a sticky-backed material that you can print on. You can use your Cricut or other cutting machine to then cut out the designs (or you can even use scissors if your designs are simple enough!) One of the perks of using this type of vinyl is that you don't need to weed your project! Just print, cut, and apply like a sticker. Easy! I also love it because it allows you to use as many colors as you want (the only limit being your printer!). With traditional adhesive vinyl, you're limited to the colors of the vinyl, and if you want to create something with several colors, you'll need to cut and layer each color of vinyl. With printable vinyl, you'll print once, cut once, and apply once. Types of Printable Vinyl There are a few different types of printable vinyl available at JOANN: Cricut Printable VinylSilhouette Printable Vinyl! The Silhouette vinyl is thicker than the Cricut vinyl. I've used both and I now prefer the Cricut—I like the more flexible material. That being said, the Silhouette will work great for most projects! How are Printable Vinyl and Printable Sticker Paper Different? Cricut, Silhouette, and other brands have both printable sticker paper as well as printable vinyl. Both use your printer to create your design. The main difference for me is thickness—the sticker paper is much thicker than the vinyl. Printable vinyl is also generally more durable than sticker paper. The price point, however, tends to be a little lower on printable sticker paper. For most projects, even with the higher cost, I prefer the vinyl over the sticker paper. How are Printable Vinyl and Printable Iron On Vinyl Different? In addition to printable sticker paper, there's one more printable material you may run across—printable iron on vinyl. Both printable iron on and printable vinyl use your printer to create your design, but the main difference is how they are applied to your base surface. Printable vinyl applies more like a sticker whereas you'll need a heat source (like an iron, Cricut EasyPress, or heat press) for printable iron on vinyl. Printable vinyl is best for smooth surfaces, like glass, plastic, metal, notebook covers, and even paper. On the other hand, printable iron on vinyl is primarily used on fabric, so you can use it to make t-shirts, onesies, and more. If you're looking for a tutorial on using printable iron-on vinyl (HTV), I have that in the works! What Can I Make? Stickers for planners, notebooks, etc.Labels (see my tutorial below for labels for cleaning supplies!)Decals What Printer Do I Need? To get the best results, use an ink jet printer with your printable vinyl. A laser printer gets to very high temperatures and could melt the vinyl inside your printer—nightmare! Is Printable Vinyl Waterproof? The Cricut and Silhouette brands are not waterproof, though it will hold up to water a bit better than the sticker paper. Do You Need Transfer Tape for Printable Vinyl? Most vinyl projects require transfer tape to move your design from the backing carrier sheet to your final base surface. Printable vinyl does NOT need transfer tape—in fact, transfer tape will ruin your project. So make sure your printable vinyl projects are not too intricate. You'll need to pick up the label like a sticker and transfer it to your project by hand. How to Make Labels with Printable Vinyl Okay! Let's actually make something with this material. I have a set of nine printable cleaning labels for you to download for free, but you can also visit my shop and get the full set of more than 70 labels! Enter your first name and email address in the box below for access to this freebie, along with other fun free files in our email newsletter! If you have already accessed a freebie from my site, just enter your information again—you won't be added to any additional lists. This freebie is for personal use only. You can learn more about our commercial license. For this project, you'll need: Create Your File in Cricut Design Space All of the labels, both the free and paid versions, come in sets of nine labels to make uploading them to Cricut Design Space easier. Learn more about uploading SVGs to Design Space. Once you upload the files, click "Ungroup" at the top of the Layer Panel on the right so that all of the labels can be manipulated individually. Delete the labels you are not going to use, and resize the remaining labels based on the size of your bottles and containers. I made my cleaning caddy label 3" wide and my bottle labels 2.5" wide. Right now, these three labels are SVG files—all of the letters will be cut out of the background, like in my pantry labels (you can use them as SVGs like this if you'd like!). To use these labels like stickers with Print then Cut, we'll need to "flatten" them. If we flatten them as is, however, the letters will still be cut out of the label. So we're going to make a white circle and flatten it to the back of each label to make them circular stickers. Insert a circle using the Shapes tool in the Design Panel on the left. Then change the size of the circle to match your label. In this case, I made it 3" round to match the "cleaning" label. Then use the Arrange tool in the top Edit Toolbar to "send to back" so the circle is behind your label. You can use the "center" tool under the Align dropdown to make sure your circle and label are perfectly centered. If you flatten as is, though, your label will be gray and black. Click on the gray circle in the Layers Panel on the right and change it to white using the dropdown in the Edit Toolbar at the top. Okay! Now your labels is ready to flatten. Select the white circle and the label and click "Flatten" at the bottom of the Layers Panel on the right. Your label won't look much different but you'll see that it's now a print then cut image in the Layers Panel. Repeat this process with your remaining labels and now you're ready to print then cut! Cutting your Cleaning Labels on Your Cricut Click Make It in the upper right. There are no changes to make in the Prepare Screen, so click Continue. In the Make Screen, Design Space will prompt you to print your image on your vinyl. Remember, use an ink jet printer. For this project, keep "add bleed" checked—this will help ensure that there's no white edges around your circle. Once your labels are printed on your printer, place them on a blue or green mat. If you're using a Cricut Explore, set the dial to Custom and select Printable Vinyl as your material. If you're using a Maker, directly select Printable Vinyl as your material. Then insert your mat into the machine and your Cricut will cut circles around your labels! Troubleshooting: If your machine is struggling to read the registration marks, shine a light on your Cricut—sometimes if it's in a darker corner of your craft room, there's not enough light for it to read the registration marks. Then all you have to do is pick up your labels like stickers and place them on your containers and jars. This is a simple way to make labels using printable vinyl and your Cricut! Have any questions about printable vinyl or the label-making process? I'd be happy to answer them in the comments! More Projects to Make Looking for more ideas to make with printable vinyl?
