What does it mean when your pen blinks white

Updated 11 months ago by Amphora Team Don't worry. If your vape inhalation device is flashing it's white lights and not working as expected, it may be that your cartridge is threaded too tightly. Try to loosen it a small turn. However, if you've tried loosening the cartridge and are still experiencing flashing lights and your device is not functioning, please contact us at clientcare@infusedamphora.com, and we'll be happy to help you out. (opens in a new tab) Skip to content covid-19 status: We are currently filling orders as quickly as possible. Yes you can. While we do not recommend doing so, it is possible. Make sure you are using the included charging cord. While an Arlo device is charging the light will be red. Once it's fully charged, the light will be green. To preserve battery, the light goes off after a while, so if there is no light at all, it's likely fully charged and you can remove it. When the need arises, usually because of little or no vapor, or just to keep your vape pen in prime condition, it's very simple to clean. Wet a cotton swab with some Isopropyl Alcohol and gently swab the top where the cartridge threads screw in. Also rub around the bottom of the cartridge threads to remove any oil residue there. If you have a Contour/drop in device, you can clean around the bottom of that too. Allow device to fully dry before using it again, usually within just a few minutes. White blinking lights usually mean that the battery charge is almost completely out and should be recharged. On most Arlo devices there is a light system to indicate battery life: when you push and hold the button and a green light appears, it means there is 20 - 100% battery life remaining. When you push and hold the button and a red light appears, it means there is less than 20% battery life remaining so you should charge soon. Another potential reason for white blinking lights is that the cartridge you're using is a fake/knock-off of a proper cartridge. So try charging your device fully first, and then try your cartridge/s again. No, Arlo Vape is not resistant to water, or waterproof. Email us your questions; We're excited to assist you enjoy your Arlo Vape. Or, our Care and Maintenance page might be able to help. How do I clean my vape battery? How do you charge a vape battery? How do I reset my Smok vape? What does white light mean Juul? How do I know if my vape battery is bad? What do the colors on the kind pen mean? Why does my wax pen blink when I try to hit it? In this guide you'll learn how to take care of your O.pen 510-thread vape batteries and cartridges, or really any 510-thread . We've been manufacturing both for over a decade now, and can share insights on how to prolong your vape batteries and get the best experience vaping cartridges. If you're worried about a 510 thread cartridge leaking, that shouldn't be an issue with any of our cartridges, especially if you follow our tips. Safe and effective THC oil pen care is important, and in this article we'll show you how to use your cartridge properly and maintain it. While the basics involve installing the cartridge and inhaling - with a few simple vape pen caring tips - you'll significantly extend the life of your pen, keep your cartridges running at maximum performance and avoid having to deal with oil pen leaking. Here are a few simple vape battery tricks for your O.penVAPE vaporizer batteries, chargers and cartridges (We decided to update our guide to cover some of the most common problems and solutions for all vape pen batteries. You will be able to quickly identify the problem by reading our vape pen battery guide, and learn the solution if there is one. This guide is written by an actual user of 510-thread THC cartridges and batteries. Gain insight from someone who vapes daily and has learned a thing or two that can help provide you with the best experience vaping with THC cartridges and 510-thread batteries.): Avoid unintentionally making the same mistakes that many beginners experience by reading our helpful guide below. Following these simple tips can avoid losing any precious oil from your 510-thread cartridge. 1 - AVOID EXPOSING 510-THREAD OIL CARTRIDGES TO EXTREME TEMPERATURES Leaving your THC vape pen in the car or exposing it to extreme temperature changes may cause the cannabis oil to become highly viscous and thus lead to a leaky cartridge - it's like leaving a tube of lip balm in a hot car- messes will ensue! Prevent leaks from occurring by following each of our vape pen tips and keeping away from hot environments. 2 - AVOID DRASTIC ELEVATION AND TEMPERATURE CHANGES While O.pen vaporizer pens make the perfect companion from the beach to the mountains - try to avoid drastic elevation and temperature changes as this may force the oil to leak from the cartridge. Much like leaving a sealed shampoo bottle in your checked bag on an airplane, proper vape pen care and storage prevents leaking. 3 - PROTECT YOUR THC CARTRIDGE It can be the worst experience cracking your brand new oil cartridge because of an accidental drop. A simple solution is using an O.pen protective cover or you can purchase a cheap pencil or pen grip that is available for only a few bucks on Amazon. These inexpensive but effective products will adequately protect your 510-thread cartridge from cracking if dropped, and avoid losing any precious oil. 4 - AVOID DRAWING ON YOUR VAPE TOO HARD It's important to gently inhale to avoid pulling any cannabis oil up, not that this is commonplace. It is more likely towards the end of a cartridge, and especially true if you have been vaporizing a cartridge a lot, among multiple people, the cannabis oil will become thin enough to travel through the mouthpiece. We recommend allowing the oil cartridge to cool down before going back for another puff of the vape pen. Frequent use will cause the cartridge to become warm, and in turn, the cannabis oil inside too. 5 - UNDERSTAND MAX VOLTAGE FOR CARTRIDGES It's important not to exceed the recommended voltage for a 510-thread cartridge when vaping, and if you do, it can result in bitter tasting vapor. Typically, the average vape cartridge for vaping cannabis oil should not go beyond 4.0 volts. We understand that everyone is after a different type of vapor, and we provide the best options available with our variable voltage vape batteries for sale. We sell a variable voltage vape battery pen with 4 different settings, and recommend always starting low before going high. Now that you've learned how to take care of your oil cartridges, it's important to understand how to properly take care of your vape pen battery, so it's battery life can last as long as possible. Simple tips such as keeping it out of extreme heat and using the correct charger can make a big difference. We list the most common mistakes to avoid with a vape battery and how to properly take care of them below. 1 - KEEP YOUR THC PEN FULLY CHARGED If the light on your vape battery is flashing red - it's time to recharge. Simply connect the pen battery to the charger and insert into a USB port on a computer or other electronic device. The light on the battery and charger should illuminate, letting you know that it's charging up. Once the light on the charger turns green, the battery is fully charged and ready to use. If you're someone where the speed of charging your vape battery matters, then we highly recommend our variable voltage option that comes with a rapid 20 minute charge mode. This is our 2.0 vape battery pen that we describe in more detail below. 2 - USE A VAPE PEN CASE TO PROTECT IT As far as THC pen care goes, storage cases are often overlooked as necessities for proper care. To keep your cannabis oil pen looking brand new, keep it in a protective case. Cases allow you to make your vape pen more portable, protecting it from breaking and scratching. Some even allow you to puff on your vape pen while in the case. 3 - VAPE PEN BLINKING 3 TIMES It's common for some vape pen batteries to stop working because of a short circuit, and this is usually indicated with the light blinking 3 times. It can also mean there is a chance there is not a good connection being established with the vape cartridge and battery. Using a cotton swab and some alcohol, and cleaning it can solve this problem. You also may try adjusting the connection plate on your cartridge or battery to help re-establish a connection. You could Try using a brand new oil vape cartridge if all fails, and if it still continues to blink 3 times, it's time to grab an O.pen vape battery which comes with a Lifetime Warranty. You can watch our troubleshooting video here: 4 - VAPE BATTERY PEN BLINKING WHILE CHARGING If you're currently experiencing a blinking link on your vape pen while trying to charge it, the solution is ensuring the connections are both clean with a cotton swab dipped in alcohol. Allow for both connections to dry before trying to charge again. If the blinking continues to happen, it might be time to replace the charger. 5 - VAPE PEN KEEPS BLINKING Unfortunately, the continuous blinking from a 510-thread vape battery pen is indicating the cartridge is not compatible. This is typical with cheap vape cartridges from unlicensed brands, another reason to buy reliable oil cartridges from licensed brands such as ours. There are many reasons why you're going to want to buy a vape battery from a reputable brand. We have high standards and many safety measures to ensure quality vape batteries are manufactured. Interested in vape batteries made with high quality materials and high standards? Now that you're familiar with the proper vape pen care and general vaporizer tips, shop O.pen vape pen batteries online to ensure you're using the best equipment. Check out our dispensary finder to pick up your favorite cartridge at a dispensary near you. O.PEN VAPE BATTERIES FOR SALE Experience the luxury of being able to hit your THC oil cartridges without having to press a button, simply inhale gently for a smooth vaping hit experience with O.pen vape batteries. We have different vape pen battery options available for sale on our website, and they all come with a USB charger that makes it convenient to charge with these types of ports typically around the house. Learn about our different types of vape batteries available for sale and their different features below. ORIGINAL VAPE PEN If you're someone looking for a simple and efficient vape battery pen, we recommend the original battery and charger. It's a budget friendly option that has a single optimized temperature for vaping cannabis oil cartridges. When we first launched this vape battery, it was for sale at \$19.99, but it's currently on sale for \$9.99. It will let you take a draw for up to 8-seconds, and only has one voltage setting that's optimized for amazing vapor hits. ISH The most budget friendly and compact vape pen the internet has ever seen from an American company, buy it for only \$4.99. It also only has one voltage setting that can not be changed, but it's optimized to provide smooth hits with dense clouds from your 510-thread cartridges. This is the best compact vape battery that will not take up too much space in a purse or pocket. It's also cheap enough to not cause too much pain in the unfortunate event it becomes lost. We encourage buying multiple ISH vape batteries, and keeping them all charged to ensure you always have power available to vape. 2.0 VARIABLE VOLTAGE VAPE PEN We developed a THC vape battery that has the ideal voltage setting options for vaping THC oil cartridges. Start low for the best flavor from your 510-thread pre-filled cartridges, and finish with large vapor plumes on the highest voltage setting. Browse through a vast selection of vape pen color options, made from premium materials. We even have a vape battery pen with a wood grain finish for those who want a bit of mother nature in their vaping experience. The lowest voltage setting for this vape battery starts at 2.7 volts, and is perfect for those who want a gentle tasting vapor with a lot of flavor. A purple light will indicate this low temperature setting. The next voltage setting is medium at 3.2 volts, and is producing a higher potency draw. The highest voltage setting is 4.0 volts, and will produce the largest vapor plume, but you will sacrifice some flavor and flavor (terpenes) burn off at higher temperatures. Finally, there is a dab mode, designed for use with wax attachments. We do not recommend using this setting with any pre-filled cannabis oil cartridges as it might be too high for most. Therefore, this 510-thread battery is geared towards the more advanced user, but don't be discouraged because after reading this guide you will be considered advanced. For Child safety, disconnect the cartridge from O.pen vape battery and store when not in use. Always keep any THC pen or cartridge away from a small child's reach. You always want to keep your THC pen batteries in a comfortable mouthpiece. Originally Posted On: September 13, 2018
