## Simplicity air conditioner instructions

If you've been feeling the heat a bit too much this summer, friends at the Wirecutter have put together a guide for finding the perfect air conditioner, so you can keep cool and comfortable this year. The air conditioner you use depends completely on the space you're trying to cool, among other things. They say the most important things to look for are:How many decibels an air conditioner generates when it's running is an import factor to consider, especially for anyone planning on installing it in their bedroom or living room. If you can't sleep or hear your TV for the noise your air conditioner makes, you're trading one kind of discomfort for another.You'll likely want it to have digital controls too. Going digital allows for a number of useful features a remote control and an adjustable timer for turning your air conditioning off in the morning after you've gone to work and back on in time to cool your home before you return home at the end of the day.Airflow control's important-especially in small spaces like a bedroom. Not being able to stop cold air from blowing on your face while you're trying to sleep sucks.Finally, to save money and the environment, you'll want your air conditioner to be Energy Star compliant.They have a number of different recommendations for the "best" air conditioner models, depending on your type of room, so I highly recommend checking out their full article below-especially if you're one of the unlucky ones in 100-plus degree heat right now. Of course, if you don't want to spring for a full air conditioner, you can try one of these effective DIY alternatives, too.If you don't have an air conditioner and can't take the heat (or you just don't feel like running...Read moreGO Media may get a commissionGreat Air Conditioners ] The Wirecutter When the weather starts to heat up, most people turn their thoughts to staying cool. If you don't have central air conditioning, room air conditioners are still an energy-efficient, low-cost alternative to cool the rooms in your house that you spend the most time in.With more than 6.5 million models sold each year, air conditioners are one of the most common household appliances. According to Energy Star, cooling costs account for approximately 13% of household utility bills, which means choosing the right unit is crucial. An air conditioner that is too small for the size of the room won't cool effectively. But an air conditioner that's too big can leave your space frigid and uncomfortable.Consider the following when purchasing an air conditioner:The noise. Air conditioners have come a long way in the noise department in recent years. Among the quietest models, all you will hear is the gentle whirr of a fan. Air conditioners that score low for noise will be loud enough on low to disturb you if you're a light sleeper, and distracting when set to high.Window location. Window air conditioners tend to blow air in a single direction—which can be a problem if your window is off-centered. To be able to cool a room, the air needs to hit the middle. It's possible to find models that blow air to the left or the right. Other models have swiveling fans.Proper installation. Quite a few air conditioning units are intended for double-hung windows. If your windows are not double-hung, consider another style of air conditioner. Your window unit must also be level enough for the unit to drain properly. Electronic devices that generate heat should be located away from the air conditioner.Filter location. Make sure the filter is easily accessible. You will need to clean it regularly to keep your air conditioner working well.Intelligent features. The latest air conditioning models can be controlled and adjusted with only a smartphone. They may also be connected to other temperature control units in your home. This can allow you to save energy and minimize the cost of your bill.Warranty. Check with the manufacturer or ask the retailer about the warranty offered on the unit. A longer warranty will guarantee that your air conditioner can be used for years to come.Start by choosing the space you would like to cool and identifying where you will install the unit. Window air conditioners have varying cooling capacities, which may range from 5,000-12,500 British thermal units (Btu). You can figure out the amount of cooling capacity you need by allotting 20 Btu for every square foot of your room. If your room is 400 square feet, you will need an air conditioner with approximately 8,000 Btu.However, it's important to take other factors into consideration. If you have a high ceiling, for instance, you might need a slightly higher cooling capacity. Additionally, if your window is not in the center of the room or your space is unusually sunny for most of the day, you may want to purchase an air conditioner with slightly higher capacity. These are free-standing, easy to move air conditioners that you can move from room to room. Because they need to vent hot air somewhere else, portable air conditioners are generally set up in windows and come with their own window kit. These are ideal for people who live in small spaces and/or only use air conditioning sporadically. They can be the most cost-efficient option since they only cool off one particular area instead of the entire home space. Some options even work double-duty by including heat so you can use it year-round.WindowTraditionally found in college apartments and dorm rooms, today's window air conditioners are energy efficient, quiet and overall easy on the eyes. They can be installed in any room with a window that leads to the outside and works by filtering hot air from inside outside through the window. Window air conditioners tend to feature a fan option, heater and programmable timer. They are an efficient and economical option for small spaces.WallWall air conditioners look similar to window units with the exception that they are mounted on an outdoor wall and therefore filter hot air outside through the wall instead of a window. They tend to be more energy-efficient than window units because they create an airtight seal that keeps hot air outside. One main difference is that these units are actually built into the wall, whereas window units can be installed and taken down. They are therefore a more permanent option than window units.Ductless mini-splitUnlike portable, window or through the wall units, the ductless mini-split model is not an actual unit that can be installed in one room or another. They are capable of cooling more than one room at a time, similar to central units, but they don't require ductwork. They are made up of two main parts: a large condenser unit that needs to be installed outside and one (or more) compact blower units that can be mounted on the wall or ceiling. These mounted units are placed strategically inside the rooms or zones you want and can be controlled separately, so you can only cool the spaces you are using to save energy costs.CentralCentral air conditioning units are popular for homeowners who need to cool several rooms at the same time. These systems are fully ducted, making them a more expensive option than portable or split units but can be the best choice overall for larger homes. They work by first extracting warm air from all over your house to cool at a central point and then distributing that cool air to your house through a series of vents and ducts. The hot air is then filtered outside.Packaged Terminal Air Conditioner (PTAC)Commonly found in hotel and motel rooms, senior living facilities, hospitals, condominiums and apartment buildings, PTACs are an all-in-one air conditioner/heating unit. They are commonly installed in walls and windows. Photo Courtesy: Andrew Lichtenstein/Corbis/Getty Images There's nothing worse than a night of restless sleep — plagued by the discomfort of trying to get comfy or find that right balance between too many blankets and not enough. There's perhaps no season that's more meddlesome to one's sleep than summer. Whether you're dealing with excessive humidity or a dry heat, high temps mean a lot of tossing, turning and sweating. Thankfully, no matter what your price range, we've got just the right products to help you beat off the heat, even while you're catching some Zzz's. You know it, and you love it — it's the window fan. This tried and true method for piping in fresh air is also a great way to ventilate your room and get the hot air circulating. Does it feel hotter in your room than it does outside? No worries. The easy-to-install Comfort Zone Twin Window Fan with Reversible Airflow Control can be used to push hot air out or pull some cool night air in. Photo Courtesy: Home Depot In addition to having both intake and exhaust modes, it's also a very quiet fan, meaning you won't hyperfocus on some disruptive sound while trying to count sheep. If you don't have a window that can accommodate a fan like this one, we recommend grabbing an equally affordable box fan like this three-speed model from Toshiba. Stand it up in your room or — lifehack! — prop it in the window as best you can to achieve the benefits of a window fan. Complete with luxurious, breathable bamboo covers, Qutool Cooling Bed Pillows are an easy solution for creating a healthier — and more comfortable — sleeping environment. These "chillows" use premium shredded foam, which allows the pillow to let in air. Better yet, these lifesavers (or sleepsavers) are also infused with temperature-regulating cooling gel particles, meaning all that comfy foam stays free from heat build-up. Photo Courtesy: Getty Images Even if you get a two-pack of these customer-loved cooling pillows, you would spend far less than \$100 — and that means you can take the extra step in outfitting your bed with summer-friendly accessories. If you've ever listened to a podcast, you've probably heard an ad for Buffy — no, not the teenage vampire slayer, the comforter. Buffy's Hypoallergenic Eucalyptus Comforter is not only eco-friendly, but it's also perfect for hot sleepers who want to feel as though they're "sinking into a tub of whipped cream." Honestly, we're sold. If you're looking to up the ante a little bit, but you love the idea of a window fan-like experience, we recommend upgrading to Toshiba's 6,000 BTU 115-Volt Touch Control Window Air Conditioner. With the power to cool up to 250 square feet, this sleek, Energy Star-certified bestseller features four fan speeds for cooling, plus four-way air direction that ensures even cooling, no matter where you're sleeping (or standing) in the room. Photo Courtesy: Home Depot Want to save on energy? Switch to ECO mode or try out some of the unit's other intelligent features, including the 24-hour timer, Sleep Mode and the Filter Clean warning, all of which help you personalize your experience. Cool, dehumidify and ventilate your home all in one — we promise it's a (literal) breeze. While you may associate Dyson with great vacuum cleaners, the company has a slew of other top-of-the-line products that can go a long way in improving your quality of life. Our favorites this summer (and every season, really) are these blade-less, multi-functional appliances that act as fans, heaters and air purifiers all in one. Photo Courtesy: Home Depot Living that apartment life? Try the Dyson Pure Cool Me Personal Purifying Fan (center). This ultra-quiet machine also cools the purified air, making it the perfect summer sleeping companion. In need of an option that works for larger spaces? The Dyson Pure Cool Air Purifier + Fan, TP01 (left) is an incredible, powerful, bladeless tower fan that cools and recirculates all at once. Finally, if bells and whistles are your thing, the Dyson Pure Hot + Cool Air Purifier, Heater + Fan, HP01 (right) is the one for you. This three-in-one appliance purifies, cools and heats air, making it a year-round must-have. Trying to cool a large space? Normally, that's not an easy task for a portable AC unit, but, lucky for us all, Frigidaire's 13,000 BTU Portable Air Conditioner is a cut above the rest. This appliance can cool rooms up to 700 square feet in size, and its handy wheels allow you to cart around the relief to whichever room needs it most. Photo Courtesy: Home Depot Equipped with a remote, three fan speeds to regulate airflow and a 24-hour timer to reduce energy waste, this portable air conditioner really has it all. The only drawback might be its comparatively steeper price tag, but if you're a fan of instant gratification, then the immediate relief this unit provides is simply unparalleled. Let's be honest— in hot, humid weather, it doesn't take long to feel like you're trapped in a sauna, and you'll do almost anything to get some relief. The COVID-19 outbreak and resulting quarantine reminded us all that it's not pleasant to be stuck at home without a reliable way to stay cool and comfortable. If you don't have central air conditioning or a window air conditioner (AC), a portable AC can solve your need to cool down in an instant. The best part is you can easily move one of these units from room to room, allowing you to cool off anywhere in your home, from your bedroom to your home office. Fortunately, several excellent options on the market are designed to fit everyone's different needs. Whether you're trying to beat the heat on a budget or keep a large room cold, these portable ACs can help you stay cool. The first time you install a portable AC unit, the process might look tricky. However, each model has specific step-by-step instructions on how to set it up easily and successfully. The standard portable AC will need to vent through a window to kick the hot air out of the room and keep you cool. You may also need an adapter kit that secures the exhaust hose in the window. With that being said, it's best to place a unit near a window with an electrical outlet for easy operation. Photo Courtesy: JMATEK Group/YouTube Also, make sure the window adapter kit will fit on your window. If the kit doesn't fit, you may need to expand or trim it. Once you secure the window adapter kit and connect the exhaust hose that's included in the package, you'll be able to plug in the unit to have fresh, cold air in the room. If you don't have a window, another option is to vent the exhaust through a wall, ceiling or even door (but check to see if a portable air conditioner can work that way before purchasing it). For a better sense of how to install a portable AC unit, check out this video guide by Honeywell. Now, let's go shopping. Looking for a good deal? You can spend wisely and still rest like Sleeping Beauty during hot nights with this LG Electronics 8,000 BTU Portable AC. Its price and size are small, but its performance is mighty as it blows big blasts of cold air to cool rooms up to 200 square feet. Even better, it has three impressive modes: cool mode to chill out and dehumidify, fan mode to circulate air and dry mode for those extra-wet days. Photo Courtesy: Home Depot Find the right setting for your personal enjoyment by changing the temperature, fan speed, cooling speed and timer. Too comfortable to get up to adjust the AC? No problem. Use the handy remote control to get the job done (even all the way from across the room). Plus, its installation kit and hose make setting up this unit a breeze. Say goodbye to waking up in a sweat. With this AC, you can stay cool, comfortable and in control at an unbeatable price. If you're living the environmentally conscious life, the Whynter Elite 14,000 BTU Portable AC was created especially for you. Going green doesn't mean you have to sacrifice quality (or your budget). Approved by Good Housekeeping and Consumer Reports, this conditioner will meet your top needs: protecting the planet and cooling your home down. It's also free of chlorofluorocarbons (CFCs) and lead. Photo Courtesy: Home Depot Besides being green, this device is easy to set up and use. If you can't get enough peace and quiet, you'll be happy to know that this AC is as quiet as the dawn. And its useful features don't stop there. The unit comes with a programmable timer, digital controls, remote and wheels for effortless mobility. Its fan size and dual-hose system make it space-friendly and fast at fighting off the heat, so you have more room to stay cool and save power all at the same time. Cooling large spaces isn't easy unless you have the Frigidaire Gallery 12,000 BTU Cool Connect Smart Portable AC. It comes with a relatively big price tag — but even greater features and better operation. Designed for rooms up to 550 square feet, this unit features LED lighting and a modern mesh grille for extra style to complement any room. Tech fans will love this part the most: It connects to your Wi-Fi, so you can control your AC anytime, anywhere. Coming back home from a hike on a hot day? Use the Frigidaire app on your smartphone to turn the unit on before you strut through the doors. It's also compatible with Google Assistant and Alexa, so you can ask them to schedule the time and day when you want them to switch on the device. The future is here, and we're ready for it. If you have a small bedroom, office or apartment, your new best friend will be the Honeywell HL Series 10,000 BTU Portable AC, which cools and dehumidifies spaces up to 450 square feet. This unit handles business on hot days by combining a dehumidifying function, a three-speed fan and an auto-evaporation system. Photo Courtesy: Home Depot The full-function remote control makes it super convenient to operate the unit for those "sleep in bed all day" days. You get a lot of airflow for little effort. Plus, it's easy to move to different rooms and install if you don't want to commit it to only one place. During the hottest days of the year, the Black + Decker 12,000 BTU Portable Air Conditioner and Heater delivers a premium cooling experience for rooms of about 250 to 300 square feet, dropping the temperature as low as 55 degrees. Even better, the combo unit earns its keep all year round with a built-in heater that takes rooms all the way up to a toasty 81 degrees, if desired. Installation is quick and easy in any room with window access, but the unit itself sits on the floor on easy-to-move rollers for convenience. It's also easy to clean and comes with a remote control to help you perfectly control the temperature in the room. Additional Fan and Dehumidify settings give you additional climate control, making this unit worth every penny of your investment.
