How to pair jbl speaker to android

(Image credit: JBL) JBL has launched the latest model in its popular line of Bluetooth speakers, bringing in enhanced connectivity and a more rugged design with the new JBL Charge 5. Following in the footsteps of the JBL Charge 4 - which made our round up of the best Bluetooth speakers you can buy in 2021 - the Charge 5 comes with Bluetooth 5.1, a significant improvement from its predecessor's support for Bluetooth 4.2.JBL has also made the new outdoor speaker fully dust-proof as well as water-resistant, with an IP67 rating making it suitable for taking to the beach as well as your backyard. Inside the JBL Charge 5 is a racetrack-shaped driver, as well as a separate tweeter and dual passive radiators, which the brand says will deliver "impressive audio clarity and deep bass". Like its predecessor, the Charge 5 comes with JBL's PartBoost feature, which means you can hook it up to other compatible JBL speakers to boost the sound even further. Battery life comes in at 20 hours, so there's no change there - though that's still an impressive figure, making it longer-lasting than many outdoor speakers on the market. You can also charge your device using the speaker's built-in powerbank, making it ideal for when you're on the move. Design-wise, the Charge 5 doesn't look dramatically different compared to other speakers in the line, though it does come with silicone bumpers on each side to protect it from falls. Coming in black, blue, gray, red, teal, and an eye-catching camouflage design, the JBL Charge 5 will be available to buy in March for \$179.99 / £159.99. While global pricing is still to be announced, that works out at around AU\$230. If you're on a strict budget, don't forget that the introduction of a new model means that the JBL Charge 4 will likely be discounted - in fact, we've seen prices drop as low as \$120 / £99 / AU\$180. So, if you want to save some money, you can check out the best JBL Charge 4 deals in your region below: Check out all of TechRadar's CES 2021 coverage. We're remotely covering the online-only show to bring you all the breaking tech news and launches, plus a smattering of hands-on reviews. Jupiterimages/Polka Dot/Getty Images The Avalon is the flagship sedan of the Toyota line. It has been produced since 1994 and features a 268hp V6 engine. The Avalon also features a stereo and speaker system by JBL. If you are thinking of upgrading the stereo, replacing the old speakers, or sending them in for repair, you will need to know how to remove them. This is actually quite easy to do yourself and requires very few tools. Most of the speakers are located behind the door panels, while the subwoofer is housed behind the rear seat. Locate the screws holding in the door panels, which can be found along the perimeter of the panel. Unscrew these and collect them in a safe place. Hook the pry tool under the panel perimeter, and pry towards yourself. There will be an audible click as the panel clips disengage. Go around the panel and do this until you've removed the entire door panel. Set the panel aside. Locate the screws around the perimeter of the speaker and remove them by screwing counterclockwise. Put the screws in a safe place, separate from the door panel speaker screws. Locate the wiring harness connecting the speaker wires. This should be a small plastic unit that can be pulled apart by pressing down on the top and simultaneously pulling the two pieces apart. Repeat steps 1-4 for each of the front and rear door speakers. Locate the speaker cover, behind the back seat. This is the large cover that stretches across the entire space behind the back seat. Pry it out with your fingers until you hear a click as the cover disconnects. Use the pry tool if your fingers don't work. Pull the cover out as much as you can. Reach inside and find the wiring harness. This plastic plug is holding the stop light and speaker wires. Disconnect this plug in the same way as the other wiring harnesses. Pull the cover out completely. Locate where the subwoofer is mounted. You can recognize it as the large speaker mounted on a plastic frame. You can remove this whole unit by first unscrewing the 4 inset bolts. For this, use the ratchet. To remove the speaker, push the entire unit to one side, while pulling out towards yourself on the other side. Then push the unit the other way, working the speaker back and forth until it can be pulled out completely. Disconnect the speaker cables by clicking and pulling the wiring harness apart. CES 2021 is all virtual, but that didn't stop Harman from announcing plenty of new JBL headsets. From over-ear headphones to noise-cancelling true wireless earbuds, a lot hit the virtual show floor, so let's dive right in, just a forewarning, there are a lot of products to discuss here. JBL Tour Series The JBL Tour headsets are new additions to the JBL portfolio. Designed with business professionals in mind, the JBL Tour One and the JBL Tour Pro Plus feature adaptive noise-cancelling along with other features that frequent flyers will appreciate. JBL Tour OneThe JBL Tour One is a pair of over-ear ANC headphones with 40mm drivers and a frequency response that extends to 40kHz. The headset supports Adaptive Ambient Aware and TalkThru listening modes, and features a four-mic array for clear voice transmission. You'll get 25 hours of playback time with both noise-cancelling and Bluetooth enabled, but turning off noise-cancelling doubles that time. It charges via USB-C and supports fast charging: 10 minutes of charge supplies two hours of playback. You can use the JBL Headphones app to customize the sound profile, and certain settings like SilentNow and "My Alarm" for travel. It's fully compatible with Amazon Alexa and the Google Assistant. There is also an auto play/pause feature thanks to proximity sensors in the ear cups. JBL Tour Pro PlusIf you already own a pair of over-ears, the Tour Pro Plus might be more your style. These true wireless earbuds are way more discreet and portable than the Tour One, and offer nice features like adaptive noise-cancelling, Adaptive Ambient Aware, and TalkThru modes. The Tour Pro Plus also support Smart audio and video, which automatically optimizes the sound depending on the content (e.g., music vs. movie playback). These boast an IPX4 rating, and afford six hours of playback from a single charge. Just like the Tour One over-ears, you can extend that number to eight hours of playback if you disable the noise-cancelling feature. Supposedly, just 10 minutes in the case gives the earbuds an hour of battery life. You might like: The best JBL headphones you can buyThe Tour One and Tour Pro Plus will both be available on May 30, 2021 and will retail for \$299 and \$199, respectively. JBL Reflect Mini NC TWSThe second pair of true wireless earbuds are the JBL Reflect Mini NC TWS. These look much like last year's JBL Live 300 TWS and feature a more standard earbud design. The "NC" in the model's name indicates noise-cancelling. Like the Tour One headphones, these earbuds support auto play/pause functionality. These have a discreet charging case that you can easily pocket or toss in your gym bag. Plus, the buds merit an IPX7 rating, so you can submerge them for up to 30 minutes without damaging them. They're also compatible with Google Fast Pair, so you won't need to go digging through Bluetooth settings when pairing to Android. You can expect around seven hours of constant playback, and the USB-C case provides 14 hours of reserve battery. These will be available in the spring, and will retail for \$149. The JBL Reflect Mini NC will come in blue, white, or black. JBL expands upon its Live line of earbuds The JBL Live series is full of consumer-friendly headsets meant for everyday use. This is a very popular line of JBL headsets, and the expansion brings welcome updates to popular products. JBL Live Pro PlusJBL also added four new pairs of headphones to its Live series, the first of which being the JBL Live Pro Plus. These true wireless earbuds feature adaptive noise-cancelling. They have touch controls that let you adjust playback, and have an IPX4 water-resistant build. It even supports hands-free voice assistance for Alexa and Google Assistant. The USB-C case is Qi-compatible for wireless charging and supplies an extra 21 hours of playtime for on-the-go listening. The earbuds last six hours on a single charge with ANC enabled. These will go on sale starting on March 14 for \$179. You can pick them up in black, white, pink, and beige. JBL Live Free NC PlusThe second pair of Live true wireless earbuds announced are the JBL Live Free NC Plus. These have an IPX7 waterproof rating with up to seven hours of constant playback. The Qi-compatible charging case will add another two full charges and uses USB-C for charging. These have auto play/pause functionality as well thanks to proximity sensors built into the buds and touch controls for playback and smart assistant access. The JBL Live Free NC Plus will retail for \$149 beginning March 14. JBL Live 660NCFor those who prefer over-ears, the JBL Live 660NC might be more up your alley. These support voice access to your smart assistant. They also have Bluetooth multipoint, which lets you connect the headset to two devices at once. This is a great feature for remote workers who like to keep an ear on their phones and laptops. As with many other JBL headsets, these have noise-cancelling and share the same design as last generation's Live 650BTNC. You can enjoy 40 hours of constant playback with ANC turned on and 50 hours when ANC is disabled. That's pretty impressive considering the Tour One only gets up to 25 hours when ANC is turned on. Speed Charge technology grants four hours of playtime after just 10 minutes of charging the headset. These will be available on March 14 and will run you \$199. You can pick them up in black, blue, and also white. JBL Live 460NCJBL also threw a pair of on-ears into the mix with the JBL Live 460NC. These share all of the same specs as the Live 660NC but in a smaller, more compact design. Fast charging efficiency is even identical to the larger Live 660NC. The only difference here is that instead of 40 hours with ANC you should be able to squeeze out 50 hours of constant playback, which is impressive. These also have hotword detection to activate your favorite assistant, as well as auto-pause functionality. You can pick up the JBL Live 460NC on-ears for yourself for \$129 on March 14 in black, blue, white, and rose. Related: See more CES 2021 announcements here JBL adds to its budget headset portfolio with more Tune headsets The JBL Tune line of headsets is the most economical, and they're extremely popular among budget shoppers. JBL knows it's wise to appease money-conscious shoppers, and brought new features to affordable headphones. JBL Tune 660NC and Tune 510BT JBL Tune 660NCJBL Tune 510BTJBL updated its Tune lineup with a few new options. The Tune 660NC and Tune 510BT are two new on-ear models tuned for a stronger bass response. They feature Bluetooth 5.0 and Bluetooth multipoint. The biggest differences between the two that you should know about is that the Tune 660NC has active noise-cancelling and slightly longer battery life. You can get up to 55 hours of constant playback (44 with ANC) from the headset, compared to the non-ANC Tune 510BT and its 40-hour battery life. Both headset support Speed Charge; five minutes of charging gives you two hours of media playtime. The Tune 510BT will run you \$49 while the Tune 660NC costs \$99. Both come in three colors: black, white, and blue. JBL Tune 215BT and Tune 125BT JBL Tune 215BTJBL Tune 125BT If you're still a fan of traditional Bluetooth earbuds and don't want to deal with the hassle of true wireless, check out the Tune 215BT and the Tune 125BT. These are standard Bluetooth earbuds with a good ol' fashioned wire connecting the two. They're also tuned with JBL Pure Bass Sound and have Bluetooth 5.0. Both models have tangle-free cable, 16 hours of constant playback, and a speed charge feature that gives you one hour of playback in just 10 minutes. Unfortunately, neither model is sweat-resistant so they're not great options for the gym. The biggest difference between the two is that the 125BT model has magnetic earbuds for cable management while the 215BT does not. Both models come in black and white and will be available on March 14 for \$39. The JBL Charge 5 brings welcome improvements JBL Charge 5 has won Android Authority's CES 2021 Top Picks Award for Best Speaker. Check out all the awards here. The JBL Charge series is one of the most popular models in the world of Bluetooth speakers, and the Charge 5 doesn't reinvent the wheel. Aside from a slightly different look, it seems to be a small upgrade from the previous JBL Charge 4. It has a nice fabric covering and an IP67 dust and water-resistant build. A built-in 7,500mAh battery affords up to 20 hours of constant playback, and it doubles as a battery pack to charge your devices. It comes with Bluetooth 5.1 and has JBL PartyBoost feature so you can connect it with other compatible JBL speakers. It comes in black, blue, gray, red, teal, and a Squad color. It will retail for \$179 in April. Harman Kardon Onyx Studio 7For anyone looking for a more premium home speaker, the Onyx Studio 7 is it. This has a sleek new design and useful features like 25mm dual tweeters and an aluminum handle to move it from room to room. It has about eight hours of constant playback and can be paired with a second Onyx Studio 7 speaker for true stereo sound. You can pick one up in April for \$299. This one will be available in black, blue, and gray. If you have two Sonos Play:1s, Play:3s, or Play:5s handy, then you can make a stereo pair! This is particularly useful if you're listening to music that's in stereo, since you'll be able to hear the separate channels. Obviously, you'll want the stereo pair in the same room; otherwise, you'll hear drums in this one and guitar and vocals in another, for example. Before you start, make sure you have at least one of your speakers set up and assigned to a room. How to create a stereo pair with Sonos for Android Launch the Sonos app from your Home screen or from the app drawer. Tap the menu button. It looks like ☰. Tap Settings at the bottom of the menu. Tap Add a Player or Sub. Tap Next on the Connect to Power screen. Tap Next on the Power Up screen. Tap the dropdown menu on the Player Setup screen. Tap on your player model in the list. Tap Set up this player at the bottom of the screen. Follow the on-screen instructions. Tap Next once your player is connected. Tap Left-Right stereo pair in existing room. Follow the on-screen instructions. Tap the dropdown menu. Tap the room in which you'll have your stereo pair. Tap Next on the bottom right of the screen. Tap Add another player and follow the same steps, if you wish to do so. Otherwise, tap Not now. Tap Done on the bottom right of the screen. That's all there is to it. Just make sure that both speakers are the same model; otherwise, you won't be able to pair them. Now when you play songs that were recorded in stereo, the channels will be split between your two Sonos speakers. Happy jammin'! How to separate a stereo pair of Sonos speakers with Sonos for Android Launch the Sonos app from your Home screen or from the app drawer. Tap Settings. Tap Room Settings. Tap the room in which your stereo pair resides. Tap Separate Stereo Pair. Tap Yes in the pop-up. Your stereo pair will now be separated and, if music is playing, it will only play through the first speaker you had set up.
