Ready to fall in love with a new ear piercing? Tragus Piercing are a popular choice for many piercing enthusiasts! Here you will find all the information you need about the drilling procedure, pain level, general experience, recommends later care and tragus piercing healing time. Check out the photo gallery with more than 20 photos to have an idea of how different jights will look at your new piercing. What is a tragus piercing? The tragus piercing is located in the small piece of cartilage lasts only above your ear. This unique piercing is more visible than some other ears of the ear, since it is right in front of the ear canal, where your face ends. There are 3 types of tragus piercing: vertical tragus piercing is the traditional version. The cartilage is drilled in a straight line through so that the stones or nails really shine. The perforation of the surface swear is a penetrating surface in the same place. The skin on the edge of the face is pierced instead of the cartilage, and a small bar is the default jewelry of choice. The double or triple tragus piercing is ideal for those who want variety. The most common combination is a piercing from above and a perforation under the edge of the swear. This style can be used to create patterns with the associated jewelry. Should you get a tragus piercing? First perforated is an important decision, then lettans weigh the pres and cons. Pros: The tragus piercing is a subtle piercing, especially if you have a longer hair. This piercing is great for anyone who wants to test the piercing waters of the cartilage for the first time. Although tragus piercing sand always is obvious, you can be more creative with different types of jewelry than with some other ear piercings. Your tragus can be glued up or down for any occasion! Cons: Check your tragus first! You may not be able to pierced here if you have cartilage to be thin or short. Superficial tragus piercing are still an option if you are really fallen in love with the idea. Tragus piercing requires you to be very careful during the cicatrization process. The potential of infection is high, once itams closer to your face than other ear piercings. Following the proper afterwards instructions will drastically reduce your chances of infection during the cicatrization period. Tragus piercing and headaches There is some evidence that certain ear perforations can help in the pain of migraine pain. As acupuncture, piercing specific points can stimulate certain reflexes. Tragus piercing are told to help some with migraine pain relief, migraine sufferers so regular may consider a swear drill more than non-carriers. Some evidences suggest that there are specific nerves in the trago area that influence the control of the appetite. Tragus piercing can even help you manage your eating habits as well as possibility of migraine. Tragus piercing procedure after discussing the details with your piercer and picking up jocias, your instruments will be sterilized and your piercer will prepare for the procedure. You will lie on your back so your piercer can clean the area and get a confident vision than theyÅ ¢ is doing all the time. The cork is placed in the auditory canal, to avoid damage from the inner ear. This is to protect the rest of your ear from the forces used in your thick ear cartilage to piercing it. Your piercer will mark the piercing site with a circlic pen. After confirming this with you and repressing, the needle will be forced through your cartilage. The jewelry will be threaded through the perforation needle and fixed immediately then to a tight fit. Your piercer will discuss pose-treatment necessary and answer any other questions that Can have. You can see how the trago is pierced here and here. Thinking about doing it alone? Read our post about DIY drilling. How much damage to Tragus Piercings? 6 of 10 [value powerkit_progressbar = Å ¢ 60Å ¢ Å³ height = 20a = ³ color Å ¢ primaryÅ ¢ display_value = ¢ true ¢ striped = a = the true ¢ true ¢ Drilling is not the most painful piercing there. However, many people classify it as a 6 of 10 on the pain scale, which is not exactly nice. You will feel an acute pain when the needle pierces your cartilage, but this is short duration. After this initial pain, swelling and irritation will reduce in the following days. The classification of associated pain is dependent on your pain threshold, and everyone is different. Consider your tolerance to individual pain, the thickness of your cartilage and your general well-being, when weighing your decision. Additional reading: at least for most painful piercings. Cure and subsequent care bleeding and swelling are normal directly after having your tragus perforated. The initial stage of healing can last up to three days, depending on your body. Pay a lot of attention to any problems during this period. This is more commonly when penetrating bumps or infected auditory channels become a problem. Call your piercer or medical if your primary side effects are not gone after three days. If all goes well, your tragus piercing will take 3-9 months to heal completely. During the healing time, keep in mind the following general care tips: always wash your hands before touching your jewelry. Do not hold the phone or clothing over your piercing by prolonged time periods. Avoid sleeping on your piercing as this can cause irritation. Choose your initial jewelry carefully. Quality jewelry decreases the likelihood of rejection journals. Contact your pierce if you have a bump ear or you think your body is rejecting your jewelry. Do not change your Jewel until the cure is complete. Clean your piercing at least twice a day to avoid infection. Tragus Gallery image salt of the sea This marine salt care piercing is excellent for a soft and penetrating saline cleaner. Mix a saline solution using a liter of distilled water and four tablespoons of sea salt. To clean the piercing, jet a clean cloth or towel in your saline solution. If you notice crusted debris, hold the cushion for your piercing until the loose remains. Clean both sides of your piercing with the cushion. Try not to move your jewelry around as you clean your piercing to avoid more irritation. Read more about the best cleaning solutions for a new piercing. How to change your jewelry always remember to keep your jewelry intact to your piercing is completely cured. Tragus can be a difficult place to work. You can always go for your piercer if you need help, but here are some aotic tips to change your jewelry at home: tie your hair back if you have a longer hair that will stay on the way. Wash your hands and sterilize both your new jewelry and your piercing. Expose your piercing by pulling the cartilage forward with your fingers. Unscrew his jewels and carefully pull him out of the piercing. Quickly put the new jewelry on your piercing. Just a few hours for your piercing for permanently close, so itams important to be fast with this process. You can watch other people by changing your Jods I bring here. Best Ananis Jewelry, Nails and Dumbbells are the most common options for Piercings, but the options of style are unlimited! It Å ¢ s important to remember not to use greater jewelry in your tragus piercing. You can always size up prisoners after your piercing has healed. Check out the links below and discover your new favorite tragus jocias! How much does a piercing tragus cost? In the US, the cost ranges from \$ 25 to \$ 50. In the United Kingdom, the cost varies from £ 18 to £ 35. In Europe, the cost varies from € 20 to an Å ¢ ¸. Tragus Piercing Experience was almost midnight when 14-year-old Kyla came to the emergency room with his mother and two friendsa but knew that infected ear cartilage could not wait until the morning infections. Cartilage spread quickly and can cause permanent disfiguration to the Ear.å ¸ your ear did not even look very bad just a little red and sore where she had pierced it five days before. Iå ¢ ¸ We included an image of her ear with the piercing nails still on the spot, and an image of your ear after the earrings were removed and the piercings Cleaned.å nos did not realize how bad the infection was At the earrings were removed. Kyla had done everything right. She had her top ear cartilage pierced in a respectable jewelry store using conditions and gold earrings.An she wiped the piercings properly with solution.å anti-day but five days after her piercings cartilage were infected, a medical emergency. Even with meticulous care, piercings cartilage be infected about 30% of the time a study followed a more than 450 nurses who pierced their ears.å ¸ about 30% of a high-ears of the ear, or pavilagem piercings of the pavilha Upper headset / ear, become infected. In comparison only about 20% of the perforations of the ear of the ear being infected. The good news is that the treatment for infected piercings is simple when I get Early.å ¸ if there is no purulent secretion and no firm pocket of pus in the ear that needs to be drained (an abscess), cartilage of the infected ear can be treated with common oral antibiotics.å ¸ most infected ear perforations are caused by a bacterial called pseudomonas aeruginosa, and so you need an antibiotic that covers this bacteria such as ciprofloxacin or levofloxacin.å ¸ amoxycilin, Augmentin, and Keflex do not cover infections by pseudomonas and are not drugs right of infected ear perforations. Knowing when it is an emergency if there are pus drainage of your piercing cartilage or an abscess in the ear, you may need to be admitted to the hospital for intravenous antibiotics and possible surgical drainage of the infection. There is a metering emergency. Do not wait until a few hours. This can result in permanent loss of ear cartilage and a bad cosmetic result. Other Thorough-Head Tips Cartilage Drilling / Ear Drilling Include: Anane reactions to earrings, scars and laced ear tears, and two conditions METWORKS CALLY Piogenic granuloma and formation of Quelóide. Avoid alleging reactions to nail earrings are common, especially in nail earrings. Treatment for an allagic reaction is simple. Remove earrings and replace with gold or nylon earrings.å ¸ nylon (plastic) nails are cheap and rarely cause alemgic reactions.å ¸ by about ten times you can buy a whole selection of Different colors from Amazon.com or most jewelers. Earrings buried in the ear of the ear or ear cartilage gift for my pedicinal emergency room all the team. Of your ears by a companion or child. When pressed with great force, back earring sometimes can incorporate into the ear. Even without infection, these injuries still need medical treatment. It usually involves the removal of the parts earring with instruments And then treat the wound that Remains.å ¸, all sports alloys began a non-earring requirement to avoid these injuries. A node may appear around a new piercing pyogenic granuloma is a multi-tip complication of drilling causing a red or or Prettie near or around the piercing. This may occur from a surface of the tissue during wound healing. Quelóides are another multi-piercing complication that also results in a colorful collision of meat, usually at the piercing site. Specialized treatment of a plastic surgeon or ENT specialist is usually required for both conditions. As for Kyla, she was able to avoid the surgical treatment because she picked it up early enough. She came to the emergency room at the end of that night, giving up her plans with her friends. Although she had to remove her prisoners piercing to the infection to heal well, I hope she has minimal scars and be able to re-drill her ear after the infection solve.
