The police at Fort Lauderdale, Florida, confirmed that on January 6, a shipowner opened fire inside the baggage collection Area of Terminal 2 at the International Airport of Fort Lauderdale-Hollywood, killing five people and wounding more others, according to the office of the sheriff of the County of Broward. But even without all the information about who committed this crime, because, and how mortal the attack turns out, there are ways in which you can help those who can help those interested in what might prove to be the first mass resumption of 2017. Donate Bloodskanan Khanna / AFP / Getty ImagesIf you live near Fort Lauderdale or South Florida, consider theblood to the nearest blood bank, as victims of the shooting will probably need transfusions. A Florida-based organization called OneBlood has donation centers throughout the state, including a major center in Fort Lauderdale. The organization also offers a useful guide to if you are eligible to donate blood, and break the most necessary blood types. As always, the American Red Cross hosts blood units across the country, and has an easy-to-use blood researcher that will locate your nearest donation location according to your zip code. Victims' Recovery Unfortunately, Americans are very familiar with the medical and financial needs that follow each victim of gun violence. In this tragedy, as in many others, family members, friends and victims' loved ones often launch crowdfunding campaigns to cover medical costs for victims who cannot afford to pay for what is often a cure for all life. GoFundMe and YouCaring are two leading sites that host online fundraising where recipients are able to keep all donations provided, regardless of the total amount collected. At the time of the press, fundraisers have not yet been created for the victims of the Fort Lauderdale shooting, but they will probably appear. Donate to and Volunteer for weapons control groups PAUL J. RICHARDS/AFP/Getty Images Contact your elected officials and tell them you want a significant reform of weapons control. Join the local and national organizations committed to ending the outbreak of violence from America's deadly weapons. I don't know where to start? Here is only a sampling of respectable groups that are already organizing for a safer country (which still respects the Second Amendment): Everytown for Gun Safety reads as "the movement to end the violence of weapons", and has active chapters in all 50 states. The group has more than 3 million members at national level, and has a four-step direct action plan that anyone concerned about the violence of weapons in America can take at this time. The Coalition to stop violence against weapons is a non-profit organization consisting of 47 other groups aiming to "safeguard freedom from the violence of weapons through research, strategic commitment and effective defense of politics". Members of the Coalition include faith-based groups, legislative organizations, corporations and non-profits, who have committed themselves all in the founding principle of the Coalition that all Americans deserve to live in communities free from the violence of weapons. The Brady campaign to prevent the violence of weapons has a specific numerical objective to its heart: It aims to reduce the number of deaths of American weapons by mid-2025 through lobbying, education and policy reform. The campaign supports universal background controls, strictest regulations on "bad apple" weapons vendors, and a change in national conversation around the violence of weapons in the home, hoping to reduce the number of fatal suicides, murders and accidental losses that occur every year.These are just a few ways to help the victims of the Florida airport shooting. Donating time, money, or even condolences on social media will go a lot at this trying time. The average height of American males is 5 feet, 9 inches In 2016, the Centers for Disease Control and Prevention (CDC) released a report which showed, among other things, that the average height for males in the United States is 5 feet and 9 inches. These data are from the National Health and Nutrition Examination Survey conducted by the CDC between 2011 and 2014. The same report showed that the average height for American females is 5 feet 3 inches. Another study published in 2018 corroborated the CDC report. This study also showed that the average height for American males remained constant from 1991-2000 until 2015-2016. The study also revealed that average non-Latin American white males are slightly taller at 5 feet, 9 1/2 inches while African-American males stand 5 feet, 9 inches on average. Latin Americans and Asian Americans, on the other hand, are 5 feet, 6 inches and 5 feet, 7 inches, respectively. Standing tall as Americans There are other countries where the average height for males is 5 feet, 9 inches. One such country is Canada. Several European countries also have the same average height for men. These include the United Kingdom, Germany, France and Bulgaria. Across the Pacific Ocean, Australian males stand 5 feet, 9 inches, while New Zealand males stand slightly taller at 5 feet, 9 1/2 inches. World's tallest countries A global study published in 2016 shows that the tallest men in the world come from the Netherlands. The study showed that, as of 2014, Dutch males are on average 6 feet tall or more. The same study found that women from Latvia are the tallest in the world with an average height of 5 feet, 7 inches. Famous people who are 5 feet, 9 inches tall If you stand 5 feet, 9 inches tall, you are in the company of famous people who are as tall as you. These famous characters include two geniuses, Leonardo Da Vinci and Albert Einstein. Benjamin Franklin, Leon Trotsky and Che Guevarra were also 5 feet and 9 inches tall. Other celebrities who are or were 5 feet, 9 inches tall include Pope Francis, Michael Jackson, Justin Bieber, Robert Downey Jr., Paul Rudd, Jamie Foxx, Rudy Giuliani and Boris Johnson. History of measurements in inches and feet Measurements in inches and feet are units of the English system dating back to medieval England. During the Anglo-Saxon period in England in 450 A.D., both inch and feet units were already standard sizes. Even more interesting is the fact that the thumb (or "ynce") at this time measured three grains of barley, a unit of length very close to the modern thumb. During the Anglo-Saxon era, several pedals were used, one of which was 12 inches long. Other influences on the English system came from the Normans who invaded England in 1066. The Normans, who had Norse, Viking, Frankish and Gallic-Roman ancestors, added to the English system the measure with units of length such as the mast and furlong. In addition to standardizing the 12-inch foot, the They also created 3 feet units, which came to be known as the yard. Since a yard has 36 inches, 5 feet, 9 inches is almost 2 2 at 1.916 yards. When you were high four feet on average, both guys who girls in the United States are 48 inches or four feet of age between 6 and 7. The ideal weight for boys and girls at this height should be between 36 and 60 pounds. From age 4, children normally grow at a rhythm of at least 2 inches a year until puberty. Pediatricians usually control the height of children to their regular checks to determine if they grow at a normal rhythm. How to measure your child's height at home for this simple process, you will use a Hardcover book and a pencil. Step 1: Choose a room at home with a hard floor. Step 2: Make sure your child does not wear shoes, socks and bulky clothes. Step 3: Make the child stand straight with her back against the wall. Their arms should be on the side and their heels touching the wall. Step 4: Make the child look straight, with the head is not tilted up or down. Step 5: After securing that the child's feet are dishes on the floor, place the book on his head. With the edge of the book pressed flat against the wall, it creates a pencil sign on the wall where your son's head touches the book. Step 6: Use a tape measurement to determine the height of the child. Note next to the pencil sign on the wall (or just take note). Understanding the growth models Pediatricians encourage parents to take legal height measurements once they start walking. Taking and registering measures regularly help regularly and your child's doctor establishes a growth scheme to monitor how your child is progressing. Growth specialists prefer at least 12 months of measurements to help them establish your child's growth model. A clinical cultivated chart allows you to see what your child's percentage is compared to the heights of other children of the same age. It will also be useful to download a growing graphic app on your smartphone or any other device where you can record your child progress. The app will help you monitor your child's growth and compare her growth progression to a healthy child of the same construction. The thumb and foot is the thumb units and the length of the foot are part of the Measurement System of the British Imperial. This system is based on the old English units, the roots of which go up to 450 CE when the Germanic tribes were invading England. During this history period, Anglo-Saxon England used length measurements that are still used on the current day. The usual units of the United States measurements are largely similar to the imperial system, except for volume measurements. The following shows how 48 inches is high other units of imperial system. 48 inches = .66 Fathom (1 Fathom = 72 inches) 48 inches = .242 Rod (1 Rod = 16.5 feet) The furlong measures about an eight of a mile. There are exactly 165 four-foot lengths in a furlong. The metric system Most countries in the world have moved to the metric system of measurement. Also the United States and the United Kingdom Governments Efforts to promote the use of the metric system. This measurement system is based on 10 seconds, which means that incremental units increase or decrease for 10. The length units in the metric system include millimeter (mm), centimeter (cm), meter (m) and kilometer (km) . Below shows how 48 inches is high in the metric system. 48 inches = 121.92 centimeters (1 in = 2.54 cm) 4 feet = 1,2192 meters (1 ft = 0.3048 m) The height of the individual is often declared standing and inches when using the measurement system US usual. The countries that use the metric system usually declare a height of the individual in centimeters. centimeters.
