Free-range parents hope to make their children happier and more resilient by allowing them to explore on their own. But not everyone agrees with this style of parenting.By Dave RoosAlthough we associate adoption mainly with children, there are many good reasons why one adult may adopt another. There are also some fraudulent ones too.By Dave RoostIt's no surprise that a 2012 Gallup study found stay-at-home moms nothing like June Cleaver in "Leave it to Beaver." There were some eye-opening facts discovered about the mental state of full-time caregivers compared to their working counterparts.By Jennifer SellersPage 2Back-to-school time means stocking up on pencils, glue sticks and other traditional supplies that generations of kids have stowed away in desks, cubbies and lockers. In elementary and middle schools, teachers usually provide lists of specific items to pick up; and even in high school, many instructors require certain types of notebook paper, pens and the like.In addition to the classic supplies -- crayons, notebooks, rulers -- that continually make these back-to-school lists, there are also a number of other ones to keep in mind. Today's student has an arsenal of utensils and gizmos to help him or her manage workloads and enhance the learning experience. Whether it's a fresh spin on a classic or a newfangled gadget, these five cool school tools make the grade to get your son or daughter studying in style.Even pre-K students can get a head start on their computing know-how with learning laptops. For less than \$50, these laptoplike gadgets can reinforce the basic skills being taught in the classroom with fun, educational games and activities. In their brief history, learning laptops now come in handheld sizes with more sophisticated graphics and an extensive range of software that covers subjects including reading, math, foreign language and more. Kids can navigate through many of these models with a keyboard, electronic stylus or control pad with an interface like a video gaming system.For middle and high school students who need word processing capabilities and Internet access, netbooks are a great option. Priced at a few hundred dollars, these mini-laptops have been grabbing tech headlines for their usefulness and affordability. In fact, some schools are starting to utilize netbooks in the classroom thanks to their budget-friendly assets.Finding the perfect backpack is crucial for many school-aged kids. After all, they tote it around with them every day and want it to make a cool impression. Parents are probably more concerned about the toll the pack takes on those young backs. Thankfully, there are alternatives out there to please both parties. Unfortunately, you're probably going to have to spend more cash in exchange for ergonomic quality.To protect the back and spine, look out for packs with plenty of padding. Padded straps and back panels are good signs. Make sure that the straps fit snugly against the body, and that the backpack comes with a chest strap for added support. When wearing the backpack, it should sit higher on the back rather than straining spine by hanging down at the hips. There are also rolling backpacks to choose from, but some schools don't allow them anymore. And they might detract from that crucial cool factor that your student demands.It's important that school kids learn how to add, subtract and so forth in their heads -- with occasional help from their fingers and toes. But when higher math rolls around in junior high and onward, it's time to pull out the big guns.Calculators have been a routine item in older kids' backpacks for a while now, and they now offer more math and science help than ever before. Texas Instruments, one of the most common brands of calculator manufacturers, offers additional software, memory storage and pre-installed tutorial programs on certain models. Students can also now choose from more aesthetically pleasing calculators, such as bubblegum pink graphing editions and fire engine red beginner models.Pencil and paper will never go out of style for taking notes. But for the techie students out there who want to get the most out of their note-taking capabilities, Smartpens are neat and relatively inexpensive at around \$150. LiveScribe's Pulse Smartpen writes on specialized paper that digitally records what you're writing and where on the page. At the same time, the pen can also capture audio, which means that a student can take notes and record the lecture at the same time. When it comes time for studying, the Smartpen hooks into a computer to download all of the notes into one source. That way, students can place the Smartpen on notes on the specialized paper to hear the corresponding audio.If your student doesn't require that much tech magic, the FLY Fusion Pentop Computer from Leap Frog also digitally records what a student writes. The writing device then converts the written notes into digital documents. Like the LiveScribe Smartpen, Pentop also requires specialized paper. Since the Pentop doesn't save audio, there are many discreet mP3 recording devices and audio recording add-ons for iPods that can fulfill that function.Between the note-taking, laptop learning and backpack toting, kids have to do their homework. Whether it's solving a tough math problem, researching a science fair project or creating a bibliography for a term paper, the Web holds a wealth of educational resources. But tracking down the best of those resources can be challenging, and parents may be hesitant about unleashing their children on the Internet.Fortunately, some companies have developed robust homework helper programs for students of all learning levels. DiscoveryEducation.com, for instance, provides assistance for seven different subject areas, along with interactive games and student-tailored external Web links for additional tutoring. For a monthly fee, Cosmeo by Discovery Education is a one-stop-shop for Discovery videos, scholarly articles, step-by-step academic instruction and more. By utilizing the breadth of valuable information online, kids can enhance their learning experience and continue to make A+ grades. Looking for help for yourself or your family? ACF provides states with block grants to design and operate programs to meet Temporary Assistance for Needy Families (TANF) goals. Select your state or territory from the list below for local TANF and Tribal TANF help. For specific Tribal TANF explore the links below or view the list of Tribal TANF programs. Brian Lee/Chief of Product Management at Lifehack Read full profile Share Pin it Tweet Share Email Family is not an important thing. It's everything. - Michael J. Fox Keeping a busy family on track can take the skills of a juggler, the planning of a master strategist and the organization skills of an army supply corps officer. But a simple family communication station can make keeping track of who needs to be where much easier. A family communication station is the one place where all the information lives. It has information on schedules, shopping lists and events, as well as a place to check and leave phone messages. Simplify Family Life With A Communication Station Share Pin it Tweet Share Email Photo Courtesy: FatCamera/E+/Getty Images As you start to plan your family, it's natural to ponder what that might look like. Whether you hope to have one child or six, there's no right or wrong answer when it comes to size. In addition to matters out of your control, there are several factors that can weigh in on your decision to have more than one child. From finances to family dynamics, there are pros and cons to any size family. To help you decide what size family would be a good fit for you, we've taken a look at the advantages and disadvantages of families of every size. In a big family, everything is bigger. For some parents, this is a bonus. There are more personalities, more people to love, more children under your roof, and more relationships at play. Photo Courtesy: Marko Geber/DigitalVision/Getty Images In fact, one major benefit is the relationships your children have with one another. With more children, each child always has a playmate. This helps take some of the pressure off of you and your partner when you need a few minutes to get something done. As older children age and gaps widen between kids, you'll also find you have built-in babysitters. Older children are able to help care for younger children, even if it's only for a few moments. For your kids, there's no closer bond than with a sibling. They have a built-in friendship that hopefully carries with them into adulthood. Financially, there are also some benefits to having a large family. While more people mean more mouths to feed, think of it as an economy of scale. You'll be able to buy in bulk and cook larger meals. You'll also get the advantage of hand-me-down clothes and baby gear. Moreover, children in bigger families report being happier on average. Kids in big families learn teamwork, sharing, how to play alone, and how to play and interact with large groups. They also have a buffer if a relationship with a sibling or parent is strained for a time. In a big family, everything is bigger. For some parents, this is a bonus. There are more personalities, more people to love, more children under your roof, and more relationships at play. Photo Courtesy: Marko Geber/DigitalVision/Getty Images You can also do this with mini-groups. One parent can take the big kids to a water park, for example, while another takes the smaller children to a splash pad. Older children may be able to go to dinner with mom and dad while the younger kids stay with a babysitter. Days like this will help make sure kids get the attention they need. Of course, finances are another sticking point for some families when it comes to having more children. More children may mean a bigger home, and, moreover, you could end up spending more on activities, education, travel, and recreation. Family vacations may need to be a bit more creative to cut down on costs when it comes to hotels and airfare. Depending on where you live, the size of your home might also be a disadvantage. In high-priced real estate markets or dense urban areas, square footage comes at a premium. You may need to consider moving further out from a city center or living in smaller quarters with kids sharing rooms. Having a small family has its perks. The relationship between a parent and their child may be closer without the demands of other children on their parent's attention. Financially, having one or two kids is more cost-effective when it comes to housing, education, the size of your car, and recreational activities. Photo Courtesy: kate_sept2004/E+/Getty Images With one or two children, it becomes more feasible to help them pursue activities, like sports or music, while giving them more focus and time -- instead of running around from event to event as you might with a larger family. Additionally, traveling becomes a little bit easier (and less costly) with fewer children. While your child may not have siblings, this also means there's no one to fight with. While sibling dynamics can lead to fulfilling relationships, they can also be complicated and a source of stress, especially if your kids develop a rivalry when it comes to excelling in activities or fighting for your attention. While there are no rights or wrongs when it comes to determining the size of your family, having just one child could come with some disadvantages. The biggest? Not having a sibling relationship means much more than not having a playmate. Only children may have a more difficult time socializing, sharing, or having empathy for others. Moreover, the parent often needs to be their sole playmate, entertainment, and support system, which can be challenging. Photo Courtesy: LWA/Getty Images As parents age, this also means the only child bears the duty of caring for them. With siblings, children are able to divide up helping out their parents if one passes away or becomes ill later in life. Remember: no matter which family size you choose, there are pros and cons to everything. In the end, you'll make the most of each of your relationships, so do what feels right emotionally and financially for everyone in your household.
