Types of Crowding Out Effects There are two types of crowding-out effects. Financial exclusion is most likely to occur when the economy is growing and 3 full capacity. Therefore, government loans prevent private sector investment. This in turn will lead to an increase in interest rates. He argued that while there may be a temporary push, in the long run government spending financed by debt would cause crowding out. Therefore, higher government spending financed by higher taxes should not increase overall AD because the increase in G (government spending) is offset by a fall in C (consumer spending). For example, in the EU, bond yields increased in 2011 because markets were concerned about EU debt levels. It depends on the state of the economy When the economy is growing strongly, the government will have more competition from other private sector investments. It should be noted that there will be lower consumer spending when a government increases the tax on consumers. John M Keynes. Therefore, government bond yields will have to rise to attract savings from other investment projects. EU bond yields ŕ increased in 2011/12 on account of increased borrowing and debt financing. no effective lender of last resort. Therefore, even a very small increase in interest rates (of financial expulsion) could cause a very large drop in private sector investment. The aggregate economic effect The resources of private enterprises will be diverted in order to be used in the public sector. In his General Theory, Keynes asserted that if the economy were 3 full capacity, expansionist fiscal policy would cause crowding out.
