If I am a good driver, and I never drive away from home, why should he use safety belts? It can be an excellent driver, but if you are in an accident, even one that is not your fault, you and your passengers can be injured. Driver's position This part describes the driver's restriction system. Shoulder belt back The driver has a back shoulder belt. This is how to use it correctly. 1. Close and lock the door. 2. Adjust the seat so you can sit straight. To see how, see "SetSats" ... Page 23 If the belt stops before it reaches the buckle, tilt the 5. In an accident, this applies strength to strong lvic bones. And you would be less likely to slide under the lap belt. If he slid under her, the belt would apply strength on his abdomen. What is wrong with this? The shoulder belt is too loose. It will not give as much protection in this way. CAUTION: It can be seriously hurt if your shoulder belt is too loose. It will not give as much protection in this way. 26 What is wrong with this? The belt is fastened in the wrong place. 1-20 CAUTION: It can be seriously injured if your belt is fastened in the wrong place like this. In a shock, the belt would go up on your abdomen. The belt forces would be there, not in the pà © lvic bones. Page 27 What is wrong this? The shoulder belt is worn under the arm. It should be worn over the shoulder at all times. CAUTION: You can get seriously injured if you wear the shoulder belt under your arm. In an accident, your body would move too forward, which would increase the chance that your head and neck neck Page 28 What's wrong with this? The belt is twisted all over the body. 1-22 PRECAUTION: A twisted belt can be seriously injured. In a crash, you wouldn't have the band's full width to spread the impact forces. If a belt is twisted, do it straight so it can work properly, or ask your dealer to i'x. To unlock the belt, just press the buckle button. The belt should be removed again. Before closing the door, make sure the belt is out of the way. If you hit the door, you can damage both the belt and the vehicle. The best way to protect the fetus is to protect the mother. When a seat belt is used properly, the fetus is more likely not to get hurt in an accident. For pregnant women, as for any other person, the key to effective safety belts is to use them properly. Page 31 Lap-Member Belt All rear seats have laphom belts. That's how to use one properly. 1. Take the plaque and pull the strap through you very quickly. Page 32 3. Direction Tips Driving in Curves It is important to take curves at a reasonable speed. Many of the "lost drivers
controls"... Emergency Management There are times when management can be more effective than braking. For example, you come over a hill and find a truck stopped in your lane, or a car suddenly comes out of nowhere, or a child turns around between parked cars and stops right in front of you. Recovery Off-Road You can find that your right
wheels have left the edge of a road on the shoulder while you are driving. If the shoulder level is only slightly below the pavement, the recovery should be quite easy. Turn off the accelerator and then, if there's nothing on the road, drive your vehicle through the pavement edge. Page 250 • Don't get too close to the vehicle you want to spend while
waiting for a chance. For one thing, keeping too close reduces your vision area, especially if you are following a larger vehicle. In addition, it will not have adequate space if the vehicle in front suddenly decreases or stops. Control Loss We will review what driving experts say about what happens when the three control systems (brakes, direction and
acceleration) do not have enough friction where the tires are on the way to do what the driver has asked for. In any emergency, don't give up. Driving in Night vision problems or fatigue. 4-16 Here are some tips on
