Fast It takes no time to combine images using our tool, just upload the images, and within seconds you will get the result depending on the uploaded images Gap Between Images Unlike some other online tools where you don't get the option to have a gap between the images, that is not going to be the case here. After uploading the images and selecting the orientation you can check the box that says Gap between the images if you don't want your images to combine without a gap. Combine Unlimited Images Unlike other paid tools that only let you combine images for only a limited number of times for free. With this tool, you can combine images for an unlimited amount of times without paying a penny. Multiple Images Combining At one time you can only combine two images, but if you want to combine multiple images, then first combine two images and download it. Later use the downloaded image and combine it with the third image using the same steps. All Platform Support Since it is an online tool you can use it on any device (PC, Smartphone, tablets) running on any operating system (Android, iOS, Windows, etc). The only thing required is, you should have an active internet connection. No Sign Up The best part about this tool is that it doesn't ask you for your email for registration and sign up. You can simply visit the ImageLR site and start merging images right away. Image Formats This tool can join images of different formats like JPEG and PNG. However, it works best with the JPEG image format because this format supports millions of colors and is easy to share owing to its small size. Once the images are combined you can then download them. The downloaded image will be in the PNG format. Although PNG is a versatile image format and can be used anywhere on the internet. JPEG vs PNG: Which Image Format Is Better? PNG is a lossless compression file format i.e there is no loss in quality of the image each time it is compressed. That's what makes this format a suitable option to use on the internet. On the other hand, JPEG is a lossy compressed file format i.e some of the unnecessary information is deleted from the file to make it small in size. But the JPG file format supports more color than png file format and therefore used by Photographers to store their photos. Overall, JPEG is a file format best for images and photos with realistic colors. PNG, on the other hand, is best suited for text-heavy images and highly detailed graphics that have low colors in it.
